# IMPERIAL INSTITUTE

---

THE Imperial Institute was established to promote the industrial utilization of the raw materials of the Empire.

The technical work of the Institute is carried out by two principal Departments, viz., a Plant and Animal Products Department and a Mineral Resources Department.

*Intelligence.*—Special sections deal with enquiries relating to the sources, production, uses and marketing of raw materials, and with the collection and dissemination of general and statistical information concerning them.

*Investigations.*—The laboratories of the Institute are specially equipped for the chemical and technical examination of raw materials of all kinds with a view to determining their possible uses and value. Full reports are furnished on the composition, commercial utilization and value of materials submitted.

*Advisory Councils and Consultative Committees.*—A number of technical committees, consisting of authorities on the various groups of raw materials and acting under an Advisory Council for each department, co-operate in the work of the Imperial Institute, and close touch is also maintained with producers, brokers, merchants and users. Valuable help can thus be given to persons interested in the development of Empire raw materials.

*Library.*—The Library of the Institute contains a large collection of works of reference relating to Empire countries and their products, and is regularly supplied with the more important official publications of all countries of the Empire and with over 800 technical and scientific periodicals. The Library is open to enquirers from 10 a.m. to 5 p.m. on weekdays (Saturdays 10 a.m. to 1 p.m.).

*Public Exhibition Galleries.*—The galleries contain comprehensive collections illustrating the natural resources, industries, scenery and life of each country of the Empire overseas. The galleries are closed for the present.

*Cinema.*—Films depicting the life, scenery and industries of the various countries of the British Empire are shown in the Cinema.

*Empire Film Library.*—The Empire Film Library maintained by the Institute contains cinematograph films illustrating the industry and agriculture as well as the life and products of the United Kingdom and the Empire overseas. The films are available for loan to schools and other approved bodies in this country without charge other than the cost of carriage both ways. A series of lantern slides of the Empire is also available for loan on similar terms.

*Publications.*—Numerous publications of an authoritative character are issued containing information dealing with the various raw materials and the related industries. Details of the principal publications are given at the end of this volume.

## INTRODUCTORY NOTE

---

Materials imported or exported on government account have been included as far as possible.

As from April 1, 1937, the statistics for India include the trade with Burma, and exclude the direct foreign trade of Burma, which is given separately.

The statistics for Germany and Austria do not include the trade between these two countries during 1938.

Trade statistics for Japan do not include trade between that country and the rest of the Japanese Empire. Trade figures for Korea and Formosa include the trade with all other parts of the Japanese Empire.

Except where otherwise stated the trade figures are intended to represent imports for home consumption and exports of domestic produce. In the case of foreign countries, however, many countries include a certain amount of "nationalised" goods, i.e. goods originally imported, but which, if dutiable, have been charged with duty and subsequently re-exported. Goods imported for "improvement" and re-exported after "improvement" are also generally included.

The units of quantity adopted are the cwt. of 112 lb. (avdp.); ton of 2,240 lb. (avdp.); imperial gallon and metric carat. For precious metals the troy ounce of 480 grains is used.

Further particulars relating to the various minerals and metals referred to in this summary will be found in the monographs published by the Mineral Resources Department of the Imperial Institute (see lists at the end of this volume). These monographs contain much information which has a bearing on the statistical data recorded in this volume.
